

Homework 6 Part1

Take the working problems from Homework 5 and place them into some kind of a dashboard or portal:

Use a class called DashBoard to give the user options to run the programs from HW5.

- 1) in DashBoard instantiate an instance of each of the problems from HW5.
- 2) In the problems from HW5 remove the main method and replace with some other public method to execute the code.
- 3) Invoke that public method from Dashboard if the user chooses too.
